

Slatterly Park - Site Plan

10 Street & 11 Avenue SE

Amenities

- A) Shelter & Restrooms
- B) Playground
- C) Horseshoes
- D) Baseball
- E) Softball
- F) Frisbee Golf Course
- G) Volleyball
- H) Parking for 80 cars

Electrical

**DO NOT OVERLOAD
CIRCUITS!!!**

Figure out the amps required for each appliance with the following formula:

$$\text{Amps(A)} = \frac{\text{Watts(W or VA)}}{\text{Volts(V)}}$$

Sometimes the amps may be listed on the appliance. Add together the amps from individual appliances in such a way to stay below the maximum limit per circuit. To be safe, stay 3-4 amps below the maximum, meaning 16-17 amps for a 20 amp circuit.
